St Paul's Church, Blandford Road, St Albans

Architects: MEB Design Ltd

Contractor: Farnrise Construction Ltd

Quantity Surveyor: Synergy LLP

The St Paul's Church community established a "vision group" to develop plans for the refurbishment of their church and church halls in 1988. They raised all the funding required themselves, and started building in 2009. The church, built in 1910, has been beautifully restored, and the altar moved from the north to the south end of the original building. This has allowed it to be fully integrated via elegant glass doors with the new community areas: a very welcoming reception space, meeting rooms, offices, kitchens and two large halls. The finished project has created a very attractive church surrounded by a comprehensive community resource. The St Paul's Church congregation is to be congratulated on their achievements.
